GAME HUB

Progress Report · Shell Commands · Demo Guide

What works today and how to show it

1. Progress summary

This milestone shows the project shape: console hub, login, coloured banner, shell commands, file-backed users and ratings, and one complete game (Candy). Settings is listed but not fully interactive. Other games print "not in this progress build yet".

2. Build commands (Makefile)

From the project folder (raylib win64 already under include/):

```
make project          # build gamehub.exe   <-- sir may run this
make run              # build if needed, then run
make clean            # remove executable
make LINUX=1 project  # Linux with system raylib
```

If make is not installed on Windows:

```
gcc -Wall -Wextra -std=c99 -Iinclude -I"include/raylib-6.0_win64_mingw-w64/include" -L"include/raylib-6.0_win64_mingw-w
.\gamehub.exe
```

3. Shell commands inside GAME HUB

After login the prompt is **name@hub>**. Type a command and press Enter.

Command	What it does
help	List commands and games
ls	Show games/ and data/ layout
status	User, theme, candy average, milestone
settings	Planned options only (stub)
clear / neofetch / fetch	Redraw GAME HUB banner
candy	Open Candy Crush window
golf / snake / ludo	Not in this progress build yet
exit / quit	Save settings and quit

4. Login flow

Start → 1 login or 2 register → username → password. Register appends to data/users.txt. Login matches a line. Empty or wrong input fails safely.

5. Demo order (~5 minutes)

1. In project folder: make project
2. Run: make run (or .\gamehub.exe)
3. Register or login
4. Type help then ls
5. Type status
6. Type candy — play a few swaps — ESC
7. Rate 1–5 or 0 to skip
8. Type settings — say "next milestone"
9. Type exit

6. Short answers for viva

Why a shell? One place for login, files, and games.

Why only Candy? Progress: architecture + one finished room.

Structs / files? User and Session in hub.h; users.txt and ratings.txt.

make project? Makefile target runs gcc on the three .c files with raylib.

7. Data files

File	Format
data/users.txt	username password
data/ratings.txt	username game rating(1-5)
data/settings.txt	integers: mode difficulty theme …

8. Windows notes

Use Windows Terminal for ANSI colours. Raylib win64 MinGW folder must sit at include/raylib-6.0_win64_mingw-w64/. Without make, use the gcc line above or build.bat.
